Create your first webpage…

- Open your IDE
- Right click on the **~** at the top left
- Click on **New Folder**
  - Name the folder **chapter5**
- Create an **examples** folder inside of **chapter5**
- Create a new file inside of **examples** called **index.html**
- Inside that file, type the code to the right →
  - You may put anything you want in the body, if it is appropriate!

```
<!DOCTYPE html>

<html lang="en">
    <head>
        <title>
            hello, title
        </title>
    </head>
    <body>
        hello, body
    </body>
</html>
```

…now serve up your webpage

- In the terminal of your IDE, **cd** into **chapter5/examples**
- Then type `http-server`
- You should see the following:

```
~/chapter5/examples/ $ http-server
Starting up http-server, serving ./
Available on:
  https://ee22800f-965d-4864-86f4-571dbbdafb57-ide.cs50.xyz:8080
```

- Now, click on the link, then **Open**
- You should now see your file, click on it to see your new webpage
